

AI & MACHINE LEARNING ABSTRACTS

International Congress of Parkinson's Disease and Movement Disorders®

August 27-31, 2023
Copenhagen
DENMARK

International Parkinson and
Movement Disorder Society

AI & Machine Learning

161

Contribution of MRI and machine learning approaches to the diagnosis of patients with early-stage parkinsonism in a situation of clinical uncertainty

276

Machine learning classifies Parkinson's Disease and Progressive Supranuclear Palsy on saccade, pupil, and blink measures during a naturalistic free-viewing task

296

Machine Learning Prediction of Motor Score Reduction following DBS Surgery in PD

297

Machine Learning Prediction of Gait Dysfunction from DTI Multi-Spectral Diffusion Weighted Imaging ROIs

389

Leveraging MRI and machine-learning for early detection of cognitive impairment in Parkinson's disease

838

Analysis of functional connectivity using machine learning and deep learning in EEG data from patients with focal dystonia

951

New machine learning approaches in tic detection: Seeking to learn more about the characteristic of tics

1119

Machine learning reveals candidate genes from Parkinson's disease associated loci

1211

Artificial Intelligence to detect and classify tremors in patients with Parkinson's disease and related conditions

1548

Machine learning selects common fMRI features of cognitive impairment in Parkinson's disease from cross-institution datasets

1552

Explainable deep learning based detection of Parkinson's changes in MRI brain scans

1555

Artificial intelligence for the improvement of imaging biomarkers in Parkinson's disease

1599

Machine learning diagnosis of parkinsonian syndromes: network approach with two different sites

1948

Classification of Obstructive Sleep Apnea based on Statistical Features of the RR Interval using the Support Vector Machine Algorithm
